1. What is Rechvix

Rechvix is a self-hosted billing, inventory, accounting, and GST-compliance platform, built for businesses that want full control of their data. Unlike most commercial billing software, Rechvix runs entirely on infrastructure you own — your own PostgreSQL database, no mandatory cloud dependency, no phone-home telemetry. The only things that ever reach the internet are integrations you explicitly turn on: GST e-Invoice/e-Way Bill submission (a government API required by Indian law for those documents), WhatsApp/email sharing, and optional cloud storage.

Underneath, Rechvix is built for correctness that matters for a real business's books: money is never stored as a floating-point number, every stock movement is append-only and reconcilable, and every accounting entry is double-entry, enforced at three separate layers so a bug in any one layer can't post an unbalanced ledger.

2. Self-hosting quick start

The fastest way to run Rechvix on your own server (Linux or macOS):

```
curl -fsSL https://raw.githubusercontent.com/Raktim94/rechvix/main/install.sh | bash
```

This clones the repository, generates the secrets your instance needs, and starts Postgres, the migration step, the API server, and the background worker via Docker Compose. When it finishes, open the printed URL (`http://localhost:8080/setup` by default) to begin first-run setup.

Starting from a completely clean machine (no Docker or git yet)? Use the quickstart script instead — it installs both first, then runs the command above automatically:

```
curl -fsSL https://raw.githubusercontent.com/Raktim94/rechvix/main/scripts/quickstart.sh | bash
```

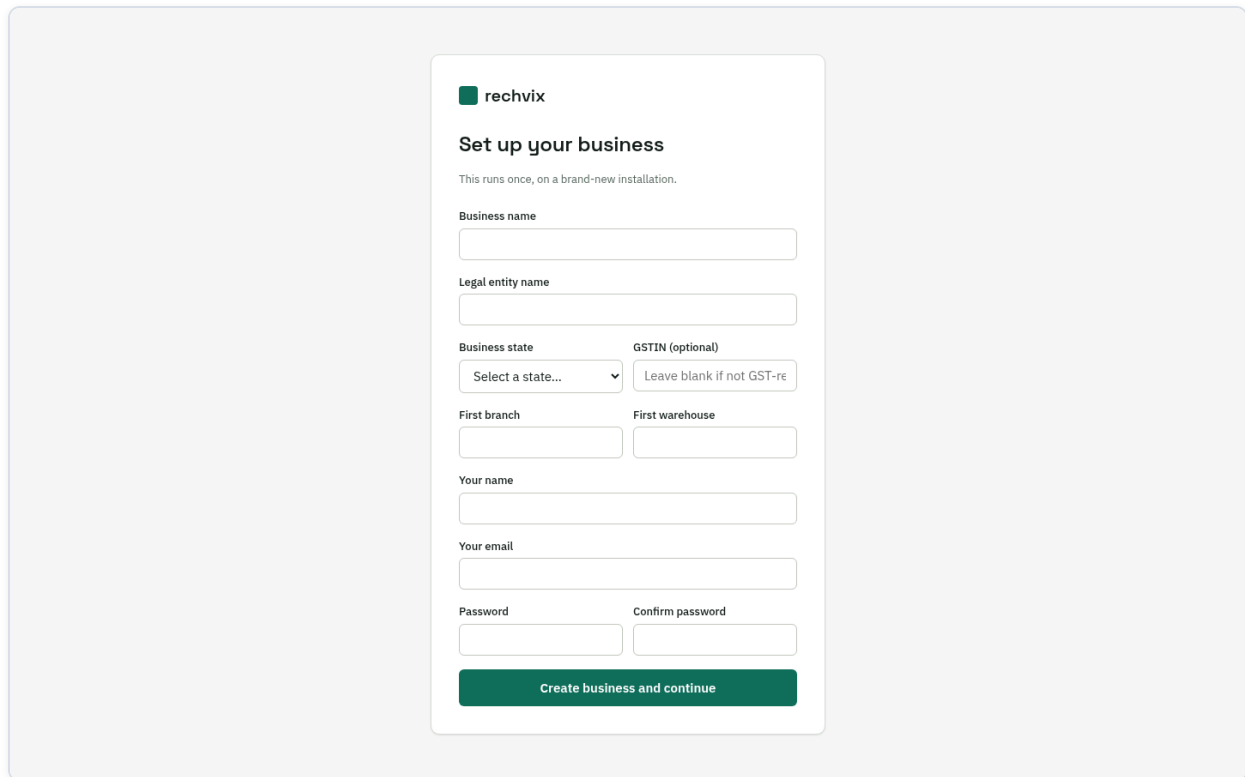

On Windows (PowerShell):

```
irm https://raw.githubusercontent.com/Raktim94/rechvix/main/scripts/quickstart.ps1 | iex
```

On Windows this installs WSL2 (Windows' own free Linux subsystem) and runs the Linux quickstart inside it — there is no separate native Windows install path. See `CONTRIBUTING.md` in the repository for a manual, Docker-free development setup using a local Go toolchain and PostgreSQL 18 install.

3. First-run setup (bootstrap)

The first time you open Rechvix, you'll land on the setup screen. This is a one-time step that creates your organisation, its first legal entity (the registered business the invoices are issued under), a branch, a warehouse, and your own owner account.

The image shows a web form titled "Set up your business" with the Rechvix logo at the top. Below the title is a subtitle: "This runs once, on a brand-new installation." The form contains several input fields: "Business name", "Legal entity name", "Business state" (a dropdown menu with "Select a state..." as the placeholder), "GSTIN (optional)" (a text field with the placeholder "Leave blank if not GST-re"), "First branch", "First warehouse", "Your name", "Your email", "Password", and "Confirm password". At the bottom of the form is a green button labeled "Create business and continue".

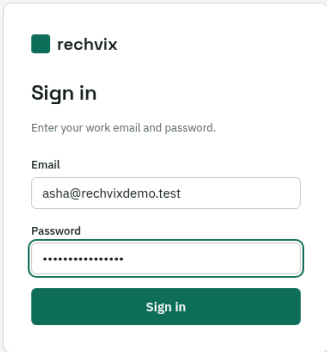

First-run setup — organisation, legal entity, branch, warehouse, and owner account, all in one screen.

Fill in your business name, legal entity name, GST state, and (if GST-registered) your GSTIN — you can leave the GSTIN blank and add it later from Settings if you're not yet registered. Choose a strong password for the owner account; this is the account with full administrative access.

Once your organisation exists, disable the bootstrap endpoint (`ENABLE_BOOTSTRAP=false` in your environment, then restart) — it deliberately has no permission check, since its only job is creating the very first organisation before any user exists.

4. Signing in

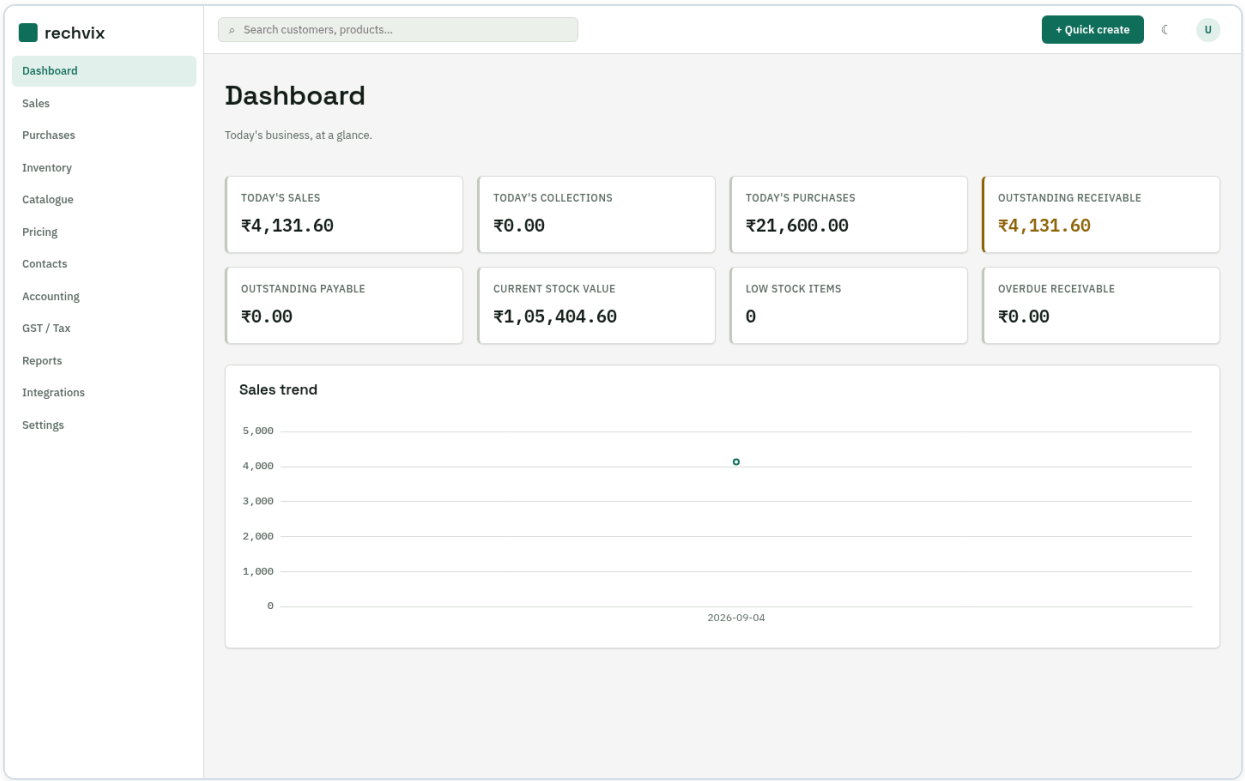

Sign in with the owner email and password you set during bootstrap. Sessions are server-managed with HttpOnly cookies; TOTP multi-factor authentication is available under your user menu for accounts that need it.

The image shows a sign-in form for 'rechvix' centered on a light gray background. The form is a white card with rounded corners. At the top left of the card is the 'rechvix' logo, consisting of a dark green square followed by the text 'rechvix'. Below the logo is the heading 'Sign in' in bold. Underneath the heading is a small instruction: 'Enter your work email and password.' The form contains two input fields: 'Email' and 'Password'. The 'Email' field has the text 'asha@rechvixdemo.test' entered. The 'Password' field contains a series of dots representing a masked password. Below the password field is a dark green button with the text 'Sign In' in white.

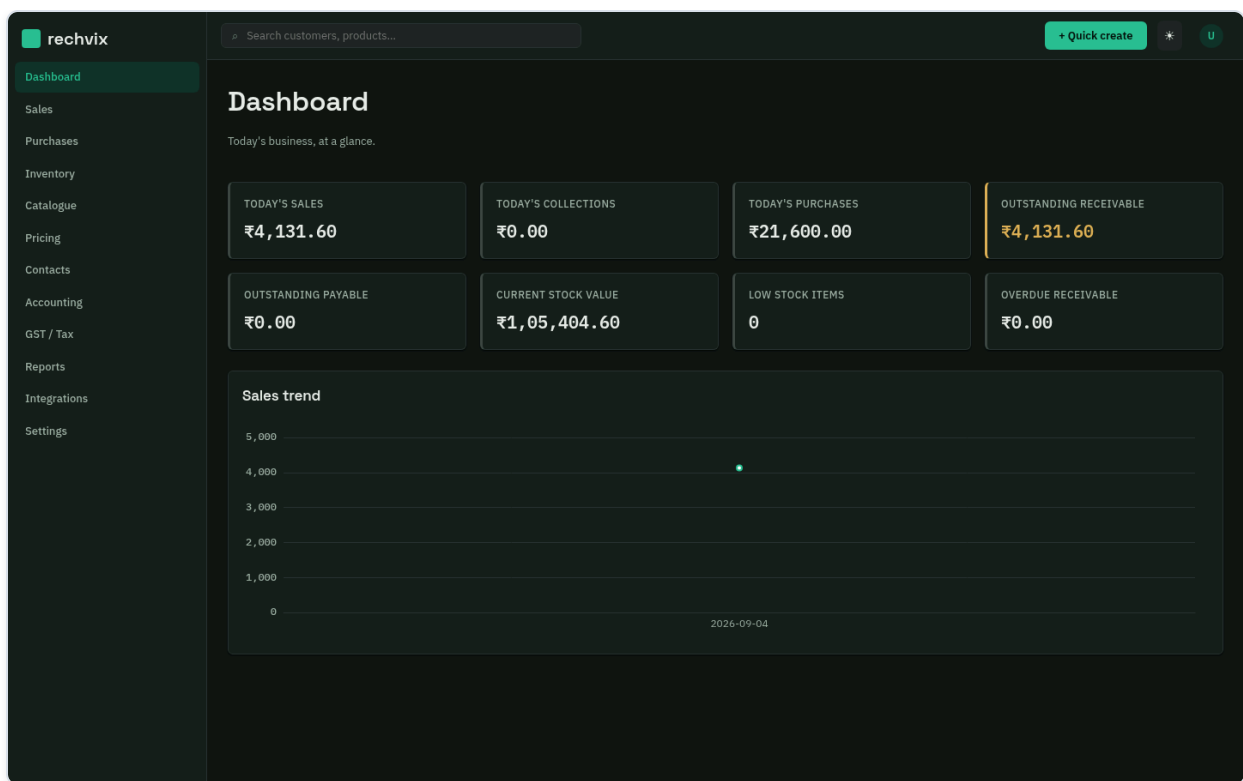

Sign in — email and password, with optional TOTP verification.

5. The Dashboard

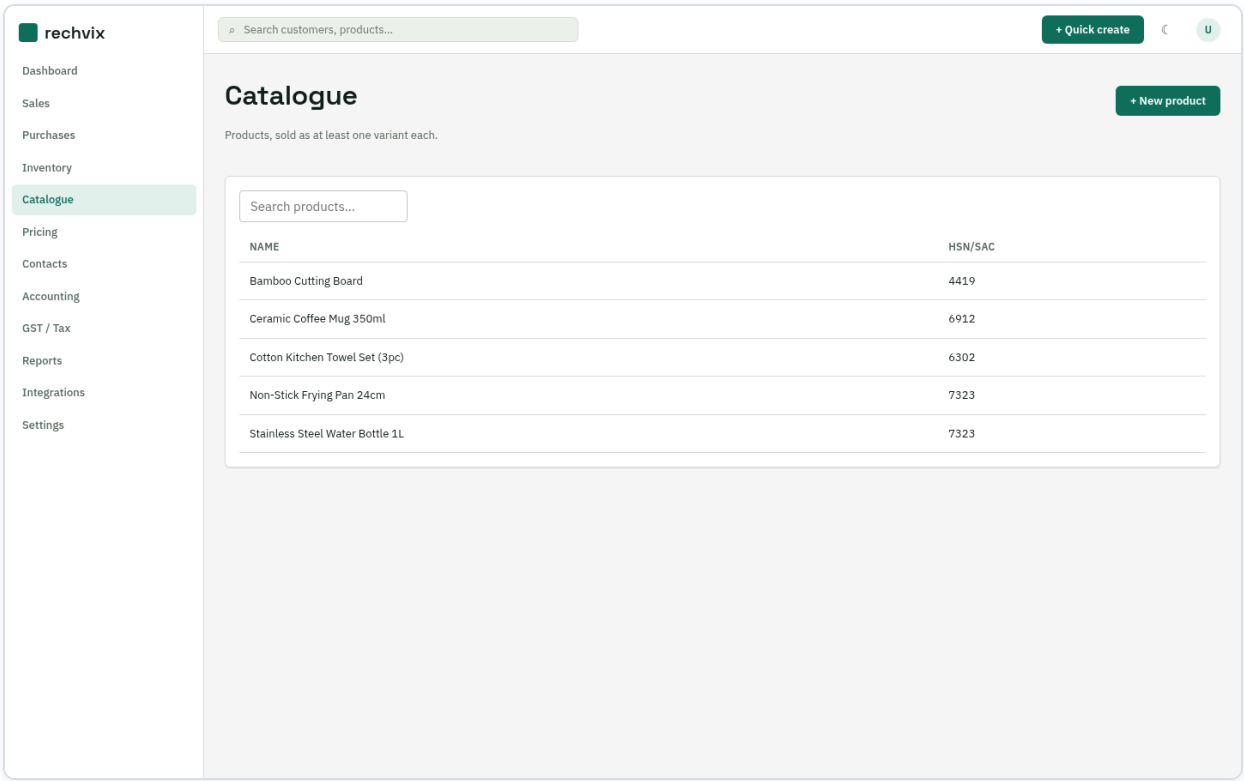

Dashboard — today's sales, collections, purchases, outstanding receivables/payables, current stock value, and a sales trend chart, all backed by real data.

The Dashboard is your daily at-a-glance view: today's sales and collections, today's purchases, outstanding receivable and payable amounts, current stock valuation, and any low-stock items, plus a rolling sales trend chart. Every figure here is computed from real finalized documents — there is no manual entry or estimate involved.

The same Dashboard in dark mode — toggle from the icon next to your account menu.

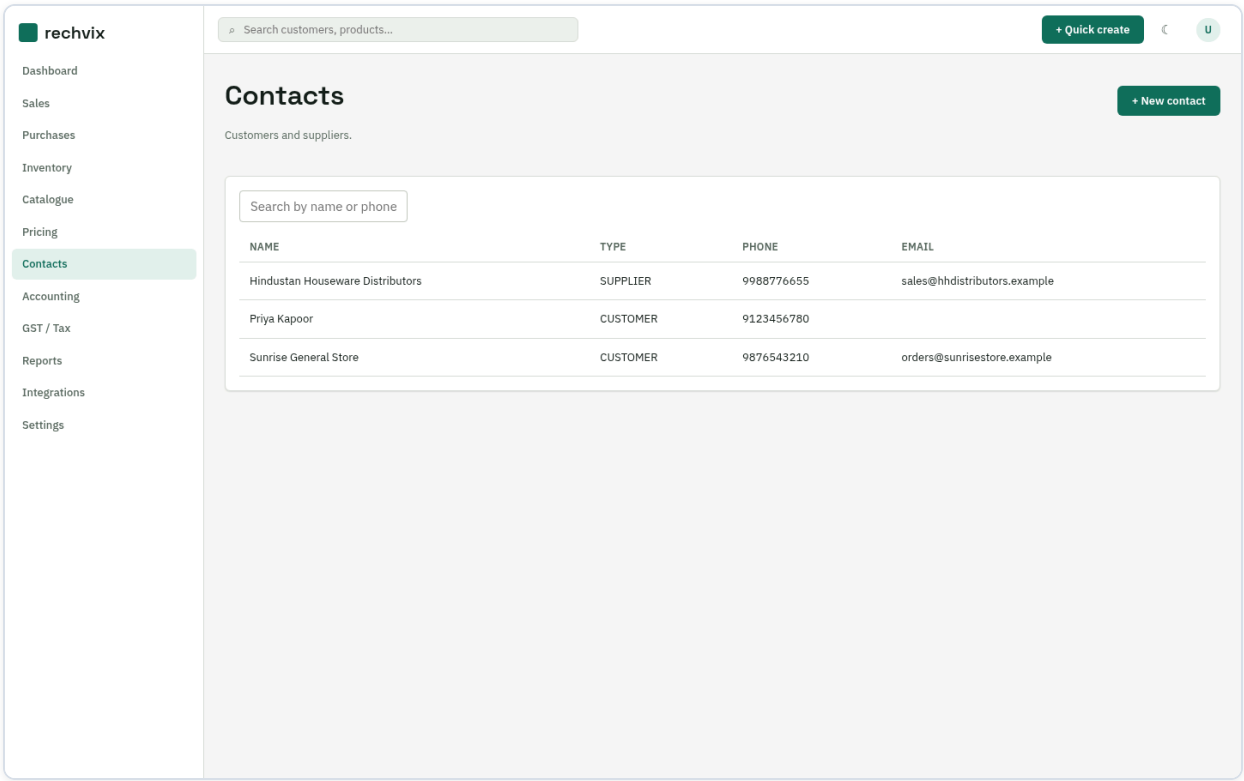

6. Catalogue & Pricing

Catalogue — every product you sell, with its HSN/SAC code for GST classification.

A product isn't sellable until it has at least one variant (the actual SKU-level record a sale or stock movement refers to) and a unit of measure. Add a unit once (e.g. "PCS" / "Pieces"), then create products against it with their HSN/SAC code — this code is what Rechvix uses to look up the correct GST rate at billing time. Set retail prices for your products under the Pricing screen, organised into price lists (e.g. "Retail", "Wholesale") so different customer segments can see different prices automatically at billing time.

7. Contacts (customers & suppliers)

Contacts — customers and suppliers in one list, each with phone, email, and (for customers) an optional credit limit and payment terms.

Every customer and supplier is a "party" — a party can be a customer, a supplier, or both. Add a credit limit and payment-terms days for customers you extend credit to; Rechvix uses these to compute ageing on the Accounting screen and to warn you at billing time if a sale would push a customer over their limit.

Items (2)

#	HSN/SAC	QTY	RATE	TOTAL
1	4419	1	₹599.00	₹599.00
2	7323	1	₹899.00	₹899.00

Grand total

—

Hold for later

Save & continue to e-Way Bill

Continue sale — resuming a held draft: the customer, items, and running total are all exactly as you left them.

The billing screen is built for speed at a real counter: pick a document type (tax invoice, cash invoice, quotation, etc.), a price list, and a customer, then search or scan products to add lines. Every line is saved to the server immediately — there's no unsaved draft to lose if your browser closes; "Hold for later" simply leaves the draft in your Sales list, ready to reopen exactly where you left off. The grand total, tax breakdown, and e-Way Bill eligibility are all computed by the server the moment you finalize, never trusted from anything calculated in the browser.

Sales

+ New sale

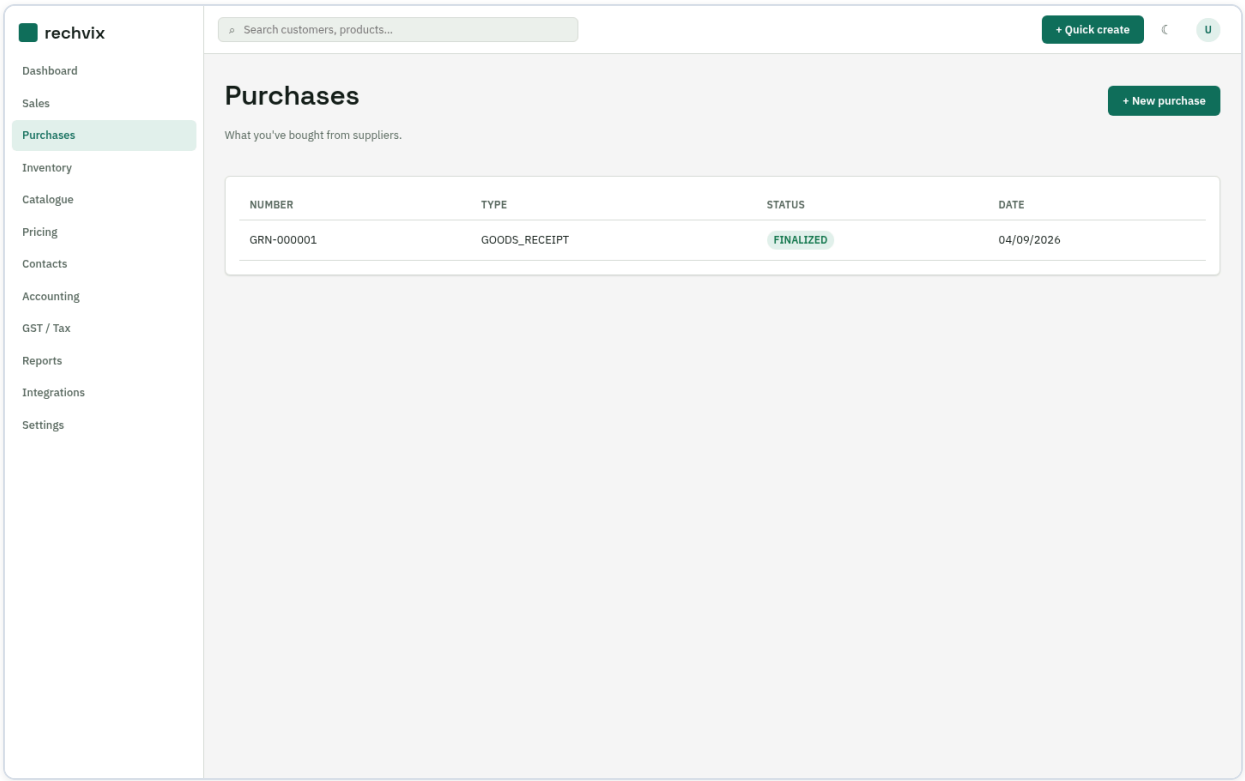

Every quotation, order, and invoice — draft or finalized.

NUMBER	TYPE	STATUS	DATE	TOTAL
INV/2026-27/000003	Tax invoice	DRAFT	04/09/2026	—
INV/2026-27/000001	Tax invoice	FINALIZED	04/09/2026	₹3,398.70
INV/2026-27/000002	Tax invoice	FINALIZED	04/09/2026	₹732.90

Sales — every quotation, order, and invoice you've created, draft or finalized.

Once finalized, an invoice is immutable — corrections happen via a credit or debit note, never by editing a posted document, the same principle double-entry accounting relies on.

9. Purchases

Purchases — what you've bought from suppliers, with the same draft-then-finalize flow as sales.

Record what you buy from suppliers the same way: create a purchase document, add lines with quantity and unit cost, then finalize. Finalizing a stock-affecting purchase type posts the stock in and, since accounting is wired in from the start, automatically posts the accounting journal too.

10. Inventory

Inventory

Current stock value and items running low.

Low stock

Nothing is running low.

Stock valuation

WAREHOUSE	PRODUCT	SKU	QTY ON HAND	AVG COST	TOTAL VALUE
Main Warehouse	Bamboo Cutting Board	BRD-BAM	40	329.45	13178.00
Main Warehouse	Ceramic Coffee Mug 350ml	MUG-350	274	134.84	36946.50
Main Warehouse	Cotton Kitchen Towel Set (3pc)	TWL-3PC	58	191.95	11133.10
Main Warehouse	Non-Stick Frying Pan 24cm	PAN-24	40	511.53	20461.25
Main Warehouse	Stainless Steel Water Bottle 1L	BTL-1L	87	272.25	23685.75

Inventory — current stock valuation per product and warehouse, plus anything running low.

Stock balances are never directly editable — they're a materialized view over an append-only ledger of movements (sales, purchases, adjustments, transfers). That means stock is always reconcilable back to a specific transaction, and a support request like "why does this product show 12 units" always has a real, traceable answer.

Payables (what you owe)

You don't owe any suppliers right now.

Chart of accounts

Accounting — a live trial balance and who owes you (and who you owe), generated automatically from finalized sales and purchases.

You never post journal entries by hand for ordinary sales and purchases — finalizing an invoice or a purchase automatically posts the correct double-entry journal lines. The trial balance always balances by construction; if it didn't, that would indicate a bug, not something for a bookkeeper to plug with a correcting entry.

12. GST & e-Way Bill

The screenshot displays the 'GST / Tax' section of the Rechvix application. On the left is a sidebar menu with options: Dashboard, Sales, Purchases, Inventory, Catalogue, Pricing, Contacts, Accounting, **GST / Tax** (highlighted), Reports, Integrations, and Settings. The main content area has a search bar at the top and a '+ Quick create' button. Below the search bar is the 'GST / Tax' header with a subtitle 'Tax rates, e-Way Bill settings, and filing summaries.' The 'e-Way Bill' section allows users to choose how bills are generated: 'Free government portal (recommended)' (selected) or 'Automatic'. It includes the official portal URL: <https://ewaybillgst.gov.in/>. The 'Vehicles' section has input fields for 'Registration number' (with example 'e.g. MH12AB1234') and 'Nickname (optional)', followed by an 'Add vehicle' button. The 'Transporters' section has input fields for 'Name' and 'GSTIN (optional)', followed by an 'Add transporter' button. Both sections show 'No vehicles added yet.' and 'No transporters added yet.' respectively.

GST / Tax — e-Way Bill generation mode, saved vehicles and transporters.

Rechvix supports two ways to generate e-Way Bills: the free government portal path (Rechvix prepares the file, you upload it yourself on the official portal — no extra cost, no third-party account needed) or an automatic path through a paid government-approved API connection. Tax rates per HSN/SAC code are configured here too, each with a validity window, so a rate change on a specific date doesn't retroactively alter past invoices.

Reports

Sales, purchases, and stock movement — the last 30 days by default.

Sales Invoices

DOCUMENT NUMBER	TYPE	CUSTOMER	ISSUE DATE	STATUS	GRAND TOTAL
INV/2026-27/000003	TAX_INVOICE	Sunrise Store	2026-09-04	DRAFT	0.00
INV/2026-27/000002	TAX_INVOICE	Priya Kapoor	2026-09-04	FINALIZED	732.90
INV/2026-27/000001	TAX_INVOICE	Sunrise Store	2026-09-04	FINALIZED	3398.70

Gross profit

PRODUCT	SKU	QTY SOLD	REVENUE	APPROX COGS	APPROX PROFIT
Ceramic Coffee Mug 350ml	MUG-350	6	1470.00	809.05	660.95
Cotton Kitchen Towel Set (3pc)	TWL-3PC	2	698.00	383.90	314.10
Stainless Steel Water Bottle 1L	BTL-1L	3	1485.00	816.75	668.25

Purchase summary

KEY	DOCUMENTS	TOTAL
2026-09-04	1	21600.00

Reports — sales invoices, gross profit by product, and purchase summary, for the selected period.

Reports are oriented toward what you need day to day and what GSTR-1/3B filing needs: a list of sales documents with status and totals, gross profit per product (revenue minus approximate cost of goods sold), and a purchase summary. Data here reconciles against the Dashboard and Accounting screens, since all three read from the same finalized documents.

15. Common workflows

Create and finalize a tax invoice

1. Go to Sales → New sale.
2. Choose document type "Tax invoice" and the price list to bill from.
3. Search for the customer (or add one on the spot via Quick create).
4. Search or scan each product; the current stock and price show instantly.
5. Review the items, then click **Save & continue to e-Way Bill** — this finalizes the invoice, posts stock and the accounting journal, and checks e-Way Bill eligibility.

Record a purchase from a supplier

1. Go to Purchases → New purchase, pick the supplier and document type.
2. Add each line with quantity and the unit cost from the supplier's invoice.
3. Finalize — stock is posted in and the accounting journal is posted automatically.

Generate an e-Way Bill (free government portal path)

1. On an eligible finalized invoice, open the e-Way Bill card.
2. Rechvix prepares the file with your invoice's details already filled in.
3. Click through to the official portal (a new tab) and upload the prepared file yourself.
4. Enter the resulting e-Way Bill number back into Rechvix to close the loop.

Check your GST filing numbers

Use Reports for a period's sales invoices and gross profit, and Accounting for the trial balance and GST output tax payable — both are oriented toward what a GSTR-1/3B filing needs, though Rechvix does not (yet) file directly with the government portal on your behalf outside of e-Invoice/e-Way Bill submission.

16. Troubleshooting & FAQ

My invoice's grand total shows "—" while I'm still billing

This is expected — the grand total and tax breakdown are computed by the server at the moment you finalize, not estimated in the browser while you're still adding lines. Once finalized, the real total appears immediately.

I get "One or more items don't have a GST rate set up"

Add a tax rate for that HSN/SAC code under GST / Tax before finalizing — every HSN code that appears on an invoice needs at least one tax rate on file, with a validity start date on or before the invoice date.

Can I edit a finalized invoice?

No — finalized documents are immutable by design, the same way a signed paper invoice can't be silently altered. Corrections happen via a credit or debit note, which keeps the audit trail honest.

Does Rechvix require an internet connection to run?

No. Creating invoices, tracking stock, running reports, and closing the books all work entirely offline against your own PostgreSQL database. Only GST e-Invoice/e-Way Bill submission, WhatsApp/email sharing, and optional cloud storage need internet access, and only when you use them.

Where is my data stored?

In the PostgreSQL database you point Rechvix at — self-hosted by you, whether that's a machine on your own network, your own VPS, or a managed Postgres instance you control. Rechvix has no separate cloud database of its own.

17. Getting help

For bugs or feature requests, open an issue on the GitHub repository at github.com/Raktim94/rechvix. For everything else, reach out via nodedr.com.
